

8th Grade Physical Science Study Guide

MOTION, FORCES & NEWTON'S LAWS

HOW DO FORCES AND MOTION WORK TOGETHER?

What You Need to Know

- **Motion** is a change in position & direction of an object over a distance.
- **Speed** = $\frac{\text{distance}}{\text{time}}$
- **Velocity** = speed + direction
- **Acceleration** = change in velocity
Speeding up, slowing down, or changing direction
- **Constant change in motion** (distance) = $\frac{\text{change in distance}}{\text{time}}$
- For constant acceleration, the rate that things change is constant
- **Relative motion** (motion relative to your point of view)
- **Newton's laws** explain motion
 - First Law: An object at rest stays at rest unless acted upon by an unbalanced force
 - Second Law: Force causes acceleration ($F = ma$)
 - Third Law: Every action has an equal and opposite reaction
- **Mass** = amount of matter
- **Weight** = force of gravity's pull on an object (mass \times gravity)
- **Work** happens when a force causes an object to move in the direction of the force
- **Energy** is the ability to do work or cause change

Real-Life Science Spotlight

Why do you slide further when you go down a ramp?

The answer lies in the forces acting on the object. As you slide down the ramp, the force of gravity pulls you down, and the force of friction opposes your motion.

Vocabulary to Know

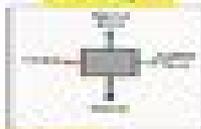

- **Speed** = distance divided by time
- **Velocity** = speed with direction
- **Acceleration** = change in velocity over time
- **Force** = push or pull that causes an object to move
- **Friction** = a force that opposes motion
- **Mass** = how much matter an object has
- **Weight** = gravitational force on an object
- **Work** = work is done when a force causes an object to move
- **Power** = work divided by time
- **Simple Machine** = helps do work by changing the amount, direction, or distance of a force
