B049207 *Physiology and Pathophysiology of the Heart* Nick Sperelakis, 1989-01-31 The first edition of this book was quite successful. As in the first edition, the book is divided into two major sections: cardiac muscle and coronary circulation. Several complimentary book reviews appeared soon after the first edition was published and written. Membrane biophysics, electrophysiology, physiological words of praise and appreciation were given both to the publisher and to me by quite a few individuals and ultrastructure. Thus, the book attempts to integrate all relevant aspects of the factors influencing the function of the heart as a vital organ under normal and various abnormal conditions. The book, taking over a year to complete, all chapters also attempt to set the foundation for an understanding of the action and mechanism of action of various factors. All contributors were asked to revise, improve, and update their articles, and all have done so with enthusiasm.
